Pure-saturation regression: NIST observations and fitted installed artifact
Methane saturation pressure
Saturation pressure, P_{sat} (MPa)
10^{0}
10^{-1}
Fitted model (fresh installed artifact)
Training observation
Held Out observation
100
120
140
160
180
Temperature, T (K)
Ethane saturation pressure
Saturation pressure, P_{sat} (MPa)
10^{0}
10^{-2}
10^{-4}
10^{-6}
Fitted model (fresh installed artifact)
Training observation
Held Out observation
Stress observation
100
125
150
175
200
225
250
275
Temperature, T (K)
Methane saturated-liquid density
Liquid density, ρ_l (kg m^{-3})
400
350
300
Fitted model (fresh installed artifact)
Training observation
Held Out observation
100
120
140
160
180
Temperature, T (K)
Ethane saturated-liquid density
Liquid density, ρ_l (kg m^{-3})
650
600
550
500
450
400
Fitted model (fresh installed artifact)
Training observation
Held Out observation
Stress observation
100
125
150
175
200
225
250
275
Temperature, T (K)
Start-model predictions are not exposed by the public regression result; 100 K ethane is an excluded stress failure.
